

WATER

Water is essential for all living beings. It is present in fruits, vegetables, leaves, flowers, air and even in our breath.

In cities, we get water from tap. At some places, water is also drawn from underground with the help of hand pumps.

At some places, people get water from lakes, ponds or rivers. They also draw water from well

SOURCES OF WATER-

On the Earth, water is present in lakes, ponds, wells, rivers, seas and oceans. These cover a very large part of the Earth's surface.

Picnic spots are often developed near lakes and rivers. The water present there is used for boating and other water sports.

Main Rivers of South India

1. Krishna
2. Cauvery
3. Godavari
4. Mahanadi
5. Narmada
6. Tapi

Utility of Rivers

Dam

Dam

A dam stores river water in it. This stored water can then be used to generate electricity. For this, it is made to fall from a height.
